- Pulling and Mounting Cable
- Cable Management
- Crafting Wiring Closets
- Patch Panel Installation & Termination
- Installing Jacks
- Cable Testing

ENTRY LEVEL TRAINING
TO GIVE YOU THE EDGE IN
CABLE INSTALLATION JOBS

The Internet, Cable and Telecommunications industry in San Antonio is growing at a phenomenal rate. Industry giants such as Time Warner Cable are looking for skilled workers to match the growth in demand.

Residential technology integration is also expected to enjoy a huge increase in demand as new homes are built with communications systems already installed. These low-voltage communications systems will require skilled technicians to install and maintain them.

To answer this demand, Palo Alto College offers the Basic Cable and Telecommunications Installer program. This program is a state of the art job-entry skills training course designed to give you the skill set you need to make you stand out from your fellow job applicants.

Course tuition includes textbook and toolkit. All classes are held on the campus of Palo Alto College. Financial aid is available for those who qualify.

Call 210.486.3412 to reserve your spot in the class or visit www.alamo.edu/pac/ce to learn more about Cable Installer or any of our other Information Technology classes.
